

User Guide

To run the game, you can type down the following in the command line:

```
>>javac Display.java
```

```
>>javac UserInterface.java
```

```
>>java UserInterface
```

Now you are in the game!

Guess a word in six tries.

Each guess must be a valid five-letter word.

Hit the confirm button to submit or hit the delete button to delete the previous character.

After each guess, the color of the tiles will change to show how close your guess was to the word.

Green stands for correct character:

Yellow stands for wrong spot:

Gray stands for not contained in the word:

After you win or lose, you can choose to play again and you can leave at any time by closing the window.
